Prerequisites

- Knowledge of **Kubernetes**, watch the dojo for Kubernetes project with the IBM internal link or external link
- Access to a Kubernetes cluster, either minikube or remote hosted
- Source code control and development with **git** and **github**, watch the presentation with the IBM internal link or external link for git and external link for pull requests
- Get familiar with **golang** language, watch the introduction dojo with the IBM internal link or external link
- (optional) Knowledge of **Istio** and **knative**
- If you have more time,
  - Read Kubeflow document to learn more about Kubeflow project
  - Browse through Kubeflow community github

Tips for success

- Access to a Kubernetes cluster
  - minimal spec: 8vcpu, 16gb ram and at least 50gb disk for docker registry
  - On IBM Kubernetes Service, provision the cluster with machine type b2c.4x16 and 2 worker nodes
- Follow Kubeflow document to have your cluster prepared
  - On IKS cluster, follow this link to install the IBM Cloud CLI and helm followed by setting up IBM Cloud Block Storage as the default storage class
